

# Partnering for Success: India's Largest cigarette capsule manufacturer

## Client Profile

India's Largest cigarette capsule manufacturer with country wide network of tobacco manufacturing plants.

## Engagement Brief

Greenwave was chosen to consult and design a solution for product integrity of the capsule factory which will be de facto standard for their 3 plants.

## Solution Construct

Greenwave deployed its Operations360™ platform to create a customised framework to track product genealogy starting from incoming RM to Finished Goods. The application subscribed to Rockwell's factory talk platform for hardware interlock and telemetry data capture. The solution also consists of Greenwave's API hub for third party integration required in the LAB. The platform is fully integrated with Zebra Scanners and Barcode Printers for track and trace of shopfloor process. The customer also used Green360™ platform for plant wide report and dashboard.

- ◆ End to product integrity
- ◆ Automated batch creation
- ◆ Recipe management
- ◆ RM management
- ◆ Brand scheduling
- ◆ Production & Yield analysis
